

INPUT LAYER

Excel file

processes, flows,
stocks, parameters
and scenarios

absolute amounts
and shares in the
same sheet

SOLVER LAYER

DataProvider

reads the Excel
sheets into
processes, flows,
stocks and model
parameters

DataChecker

checks the data,
fills in missing
years, and builds
the baseline and
alternative
scenarios

FlowSolver

for each year:

calculates absolute and
relative flows so that
each process is balanced

runs ODYM's dynamic
stock model for every
product stock

calculates outflows from
product lifetimes and
passes them to the next
year

repeats for every year

OUTPUT LAYER

Excel / CSV results

flows, mass balance,
stocks by cohort and
CO2 removals

Sankey & network graphs

flow diagrams for
each year and a
network graph, as
HTML files
